Validating the code:

For the HTML, I used: <https://validator.w3.org/nu/#textarea>

For CSS I used: https://jigsaw.w3.org/css-validator/#validate_by_input

I used the direct input to copy and paste each CSS file and each HTML file individually.

I then checked them and when there was a mistake I saw the line number and fixed each error until it told me there were none.

HTML:

4.

Error

End tag for `body` seen, but there were unclosed elements.

[From line 39, column 1; to line 39, column 7](#)

`</script></body></htm`

CSS:

Sorry! We found the following errors (1)

URI : TextArea

18

`.container`

Value Error : width Missing a semicolon before the property name `margin`

Till they look like this:

HTML:

Document checking completed. No errors or warnings to show.

CSS:

W3C CSS Validator results for TextArea (CSS level 3 + SVG)

Congratulations! No Error Found.

My current issues:

Click Help	Submit contact info	Click star	Submit comment
Sort by	Profile	Logout	

Click help:

Didn't see a reason to create a page but if I had to it would be easily achieved by making a new html and putting some information with the same layout

Submit contact info:

Couldn't make it to actually open the outlook page, maybe have to find the right help to do it.

Click star:

Couldn't make it stay, just fills colour while pressed. To fix it I would have to learn how to use JavaScript so stay filled when clicked.

Submit Comment:

Again, couldn't achieve that when you click send it gets added on the current page, could've been done using JavaScript.

Sort By:

Tried everything to make it work but it wouldn't work. More research and help on it would make it work.

Profile/Logout:

I couldn't figure out where it would have taken you when you click it and what information to input, if I had a clearer idea how it would work, I would have done it.
